DTC124ECA

NPN Digital Transistors (Built-in Resistors)

Features

- * Built-in bias resistors enable the configuration of an inverter circuit without connecting input resistors (see equivalent circuit)
- * Only the on/off conditions need to be set for operation, making device design easy.
- * The bias resistors consist of thin film resistors with complete isolation to allow negative biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
